### Final Write-up

My website is an info-site/fan-site for a fictional music group based in Shibuya called Fling Posse, created by King Records Co., Ltd.

One of my most significant features is the slide-in effect of the cards; each card is a photo of Shibuya with one of the group's members photoshopped into it to appear as if they took the photo, and each is labeled with the location in the photo. Using javascript, the Waypoints library, and CSS animations, I was able to make the cards slide onto the screen as the users scrolls down the page. This brings to life the cards' polaroid appearance and makes the website more interesting.

My second most significant feature is the hover and on-click functionality of the cards. When you hover over the card, the photo changes to outline the character in yellow and removes the filter on the photo so the character is separated from the background. I used CSS animations and javascript so that upon clicking the card, information about the characters pops up one at a time in circular bubbles. This animation matches the light and pop feeling of the group, and the roundness of the bubbles makes the characters feel fun and friendly.
